Github

Why this is my favourite thing ever

The problems

- Keeping track of files

- Collaborating

The solution: Version Control

Every time you edit, only the changes are saved
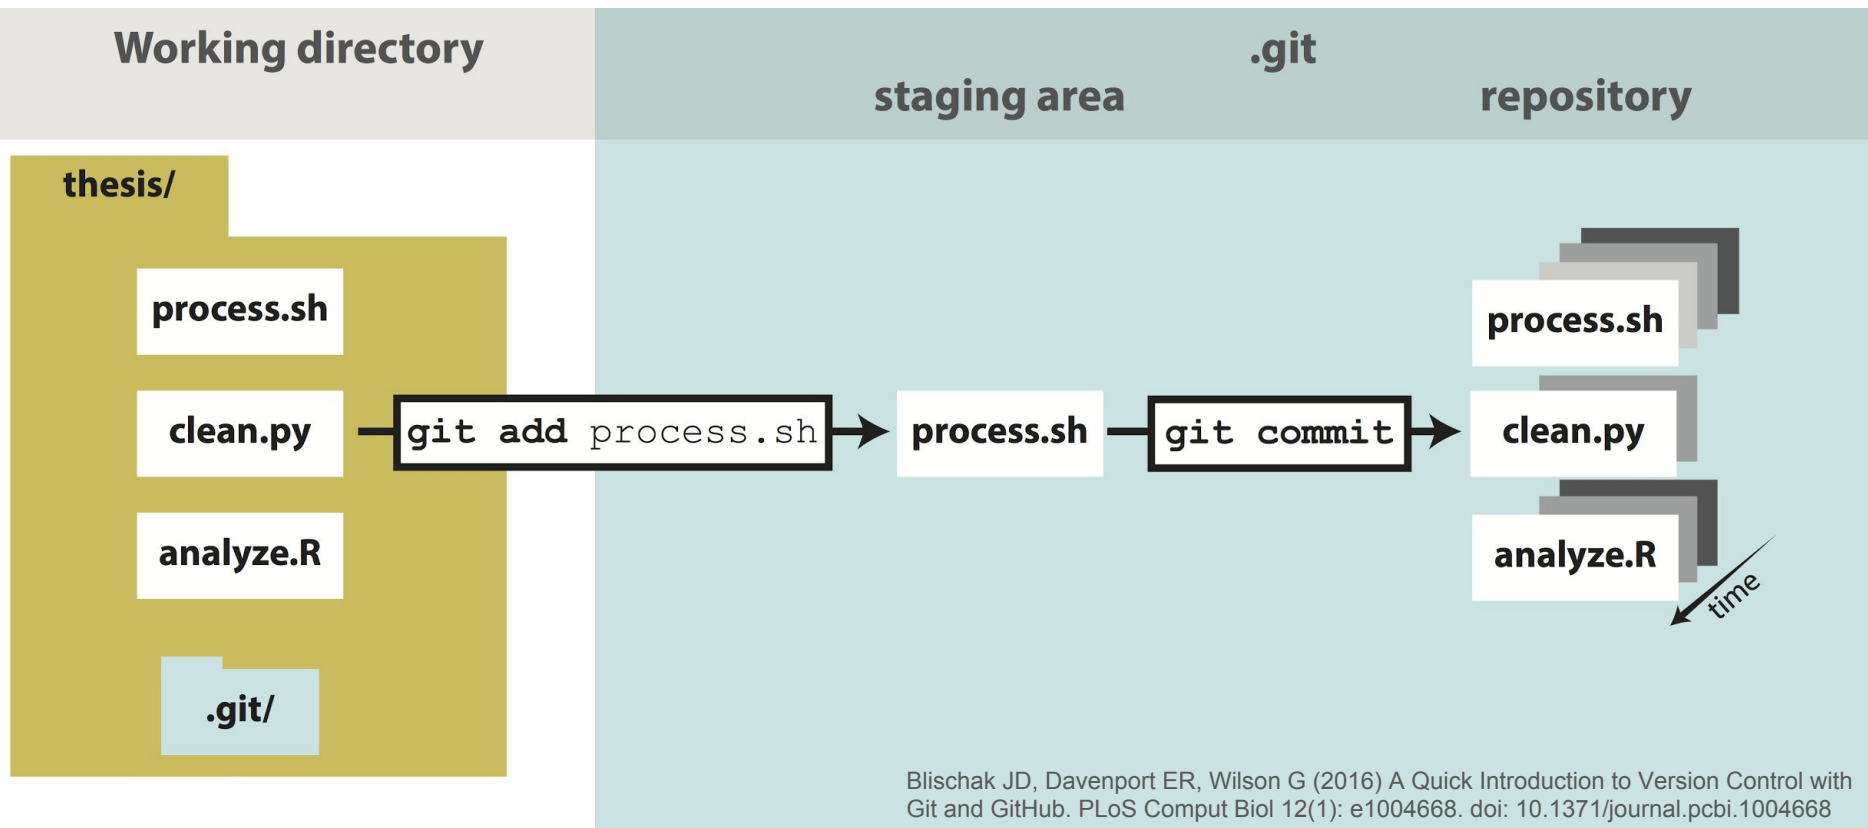

The solution: Version Control

Multiple users can edit a file and their edits can be merged

The solution: Version Control

- You keep track of who did what and when.

- You can revert to any version at any time without affecting others.

- Nothing is ever lost.

Basic Use

OK let's all try a few things!

1. Install Git

2. Examples

3. Fork a repo

4. Pull your fork

5. Push to your fork

6. Init your own repo

7. Pull/push from your own repo
